Human rights

The concept of human rights has existed under several names in European thought for many centuries, After the king violated a number of ancient laws and customs by which England had been governed, his subjects forced him to sign the Magna Carta, or Great Charter, which enumerates a number of what later came to be thought of as human rights. Among them were the rights of the church to be free from governmental interference, the rights of all free citizens to own and inherit property and be free from excessive taxes. It established the right of widows who owned property to choose not to remarry, and established principles of due process and equality before the law. It also contained provisions forbidding bribery and official misconduct. The political and religious traditions in other parts of the world also proclaimed what have come to be called human rights, calling on rulers to rule justly and compassionately, and delineating limits on their power over the lives, property, and activities of their citizens. In the eighteenth and nineteenth centuries in Europe several
Philosophers proposed the concept of "natural rights," rights belonging to a person by nature and because he was a human being, not by virtue of his citizenship in a particular country or membership in a particular religious or ethnic group. This concept was vigorously debated and rejected by some philosophers as baseless. Others saw it as a formulation of the underlying principle on which all ideas of citizens' rights and political and religious liberty was based.
In the late 1700s two revolutions occurred which drew heavily on this concept. In 1776 most of the British colonies in North America proclaimed their independence from the British Empire in a document which still stirs feelings, and debate, the U.S. Declaration of Independence.

Life in the countryside

Many people believe that life in the countryside is mush better than in the city ,well they are wrong , living in the countryside is really difficult ,going out at night , for instance , is useless since there is nowhere to go to enjoy oneself, another thing is that when a person falls sick it is difficult to find an ambulance to take him to the nearest hospital .another misconception is about pollution , the countryside is not wholly clean , the air we breathe is not as fresh as people think ,many houses are not connected to the main sewage ,and do you know that many factories exist in many villages

Globalization

Globalization refers to increasing global connectivity, integration and interdependence in the economic, social, technological, cultural, political, and ecological spheres. Globalization is an umbrella term and is perhaps best understood as a unitary process inclusive of many sub-processes (such as enhanced economic interdependence, increased cultural influence, rapid advances of information technology, and novel governance and geopolitical challenges) that are increasingly binding people and the biosphere more tightly into one global system . There are several definitions and all usually mention the increasing connectivity of economies and ways of life across the world. The Encyclopedia Britannica says that globalization is the "process by which the experience of everyday life ... is becoming standardized around the world." While some scholars and observers of globalization stress convergence of patterns of production and consumption and a resulting homogenization of culture, others stress that globalization has the potential to take many diverse forms.

humor

I think that the best things to relief from stress is to watch some sitcoms or hear something funny like jokes ...person should develop his sense of humor and he should be cool , Comic and optimistic, because some expert of mental. Health has noted that we can't imagine going through a day without laughter.
Humor will make every part of your life better.
It will help you trough difficult times and it will help you make the good times even letter, also I twill attract good people and good situations to You. So cheer up.

Citizenship

is membership in a society, community, city or town but now usually a country and carries with it to political participation; a person having such membership is a citizen. Citizenship status often implies some responsibilities and duties. It is largely coterminous with nationality although it is possible to have a nationality without being a citizen legally subject to
a state and entitled to its protection without having rights of political participation in it); it is also possible to have political rights without being a national of a state. In most nations, a non-citizen is a non-national and called either a foreigner or an alien Citizenship.

Cultural values

Groups, societies, or cultures have values that are largely shared by their members. The values identify those objects, conditions or characteristics that members of the society consider important; that is, valuable. In the United States, for example, values might include material comfort, wealth, competition, individualism or religiosity. The values of a society can often be identified by noting which people receive honor or respect. In the US, for example, professional athletes are more highly honored than college professors, in part because the society values physical activity and competitiveness more than mental activity and education.

Drop out of school

Increasing stress in school, at work, and at home has caused many students to drop out of school to escape their problems. With this increasing amount of stress and work, some students have become very frustrated and depressed. Students then drop out of school and take the easy way out to eliminate some of that stress. Students who are most likely to drop out of school are those who do not have a great interest in school, or students that have many adult responsibilities placed upon them. These problems can force some students into the work force. They do this both to provide money for themselves and to fill the gap that was once school.

Air pollution

air pollution can affect our health in many ways with a both short-term effects different groups of individuals are affected by air pollution in different ways .some individuals are much more sensitive to pollutants than are others. young children and elderly people after suffer more from effects of air pollution people with health problems such asthma .heart and lung disease may also suffer more when the air is polluted the extent to witch in individual is harmed by air pollution usually depends on the total to the damaging chemicals. The duration of exposure and the concentration of the chemicals must be taken into account. This s the end of paragraph

I wish to benefit it ok

A drought

A drought is a prolonged, abnormally dry period when there is not enough water for users' normal needs. Drought is not simply low rainfall; if it was, much of inland Australia would be in almost perpetual drought. Because people use water in so many different ways, there is no universal definition of drought... Meteorologists monitor the extent and severity of drought in terms of rainfall deficiencies. Agriculturalists rate the impact on primary industries, hydrologists compare ground water levels, and sociologists define it on social expectations and perceptions.

Science, and technology:

The distinction between science, and technology is not always clear. Science is the reasoned investigation or study of phenomena, aimed at discovering enduring principles among elements of the phenomenal world by employing formal techniques such as the scientific method. Technologies are not usually exclusively products of science, because they have to satisfy requirements such as utility, usability and safety.
Technology is often a consequence of science and engineering — although technology as a human activity precedes the two fields
In this sense, scientists and engineers may both be considered technologists; the three fields are often considered as one for the purposes of research and reference.

International organization

International Organization is a leading peer-reviewed journal that covers the entire field of international affairs. Subject areas include: foreign policies, international relations, international and comparative political economy, security policies, environmental disputes and resolutions, European integration, alliance patterns and war, bargaining and conflict resolution, economic development and adjustment, and international capital movements. Published on behalf of the International Organization Foundation.

Sustainable development

Sustainable development is a pattern of resource use that aims to meet human needs while preserving the natural environment so that these needs can be met not only in the present, but in the indefinite future. The term was used by the Brandt and Commission which coined what has become the most often-quoted definition of sustainable development as development that "meets the needs of the present without compromising the ability of future generations to meet their own needs." The field of sustainable development can be conceptually broken into three constituent parts: environmental sustainability, economic sustainability and social.

Racism:

Racism or racialism is a form of race, especially the belief that one race is superior to another. Racism may be expressed individually and consciously, through explicit thoughts, feelings, or acts, or socially and unconsciously, through institutions that promote inequality between races.
In the 19th century many legitimized racist beliefs and practices through scientific theories about biological differences among races. Today, most scientists have rejected the biological basis of race or the validity of "race" as a scientific concept. Racism, then, becomes discrimination based on alleged race. Racists themselves usually do believe that humans are divided into different races.
There are two main definitions of racism today. One of them states that racism is discrimination based on alleged race; the other - newer - one state that racism has started to include also discrimination based on religion or culture.

Describe the involvement school observance of World Environment Day

In commemorating the International Day of the Earth and the Environment allocated secondary second half of the morning for the day Saturday, 17/04/2010 station mission to embrace a range of environmental activities contributed to the activation of pupils and students in the organization and were framed from their teachers and the various components of Directors, where he was during remind everyone the importance of maintaining the planet and thus creating a clean environment to ensure a healthy life for all. In order to motivate everyone to engage in a project to create a healthy atmosphere has opened a multi-institution works with a group of pupils and students clean the classrooms The second group has planted some trees and flowers. While costing the third set and frame the professors left the national anthem on one wall organization, as well as do some murals and the municipal workers pruned some trees, which increased from an aesthetic enterprise in an atmosphere characterized by a spirit of citizenship and high all participated in the success of this day of the week allocated to the land and the environment.

Financials cris

The financial repercussions of the crisis resulting from the mortgage crisis, which surfaced in 2007 because of the failure of millions of borrowers to buy houses and real estate in the United States to pay their debts to banks.
This led to a crisis for the American economy,
reaching consequences to the economies of Europe and Asia in the process of throwing out a large number of major banks and international financial institutions. Failed by the hundreds of billions of dollars pumped into global financial markets to put an end to the crisis in mortgages, which has been brewing beneath the surface, even evolved into a global financial crisis, has made no secret of many officials fear that the global economic systems DASHES up and its implications to many parts of the world.

Secret immigration

Morocco is among the countries that suffer from the issue of illegal immigration in particular because of its geographical location. Illegal immigration as a dream of William embraces Europe. And the desire to achieve lethal to the west and other remains reflected in various regions of Morocco in particular and of Africa generally balanced between hope and despair. They decided to mount the vessel through death unknown. But nuclear weapons to consider immigration dream non-confidential for unemployed youth work and my father crossed many other reasons for true paradise ... suicide illegal immigration side adventure of using solutions for Tadert eliminated. And unemployment subsistence, poverty and weak labor market and the system of social fragility and economic reasons most important to assemble boats of death unknown.

Brain drain

Brain drain is the departure of educated or talented persons for better pay or jobs elsewhere Economically speaking, brain drain means an emigration of trained and talented individuals ("human capital") to other nations because of conflicts and lack of opportunity. It parallels the term "capital flight" which refers to financial capital that is no longer invested in the country where its owner lived and earned it. When a highly qualified professional chooses to leave his own country for another, he does so for one or several legitimate political or economic reasons. The loss of such bog number countries, but also to the scientific of skilled immigrants results in huge losses that are very difficult to compensate for even in long years to come. The brain drain is actually affecting the economies and social structures of a country, especially the emerging countries that. Have to do everything they can to stop this phenomenon.
Finally, I do believe that it is the responsibility of both governments and individuals to try harder to stop the flow of highly skilled people from their own countries resulting in a brain drain that affects each and every society.

Poverty

Poverty is becoming a serious problem for many countries; it affects the whole society and delays the development of the country. Poor families very often have health problems , because they have lot of children , parents are unable to provide medicine for them ,also they cant send them to school since schooling is expensive , they send them instead to work and bring them money , so when members of society are unhealthy or illiterate this affect the development of the country .
Poverty is a serious problem, an enemy that government should fight by trying to make all members of society benefit from the resources of their country and work for its development.

Working children

Child labour is one of the problems that many
countries face, there are various causes that drive children to work some of them drop out of school in order to help their poor or sick parents others have to work because they are orphans. In addiction some parents are ignorant they think education is a waste of time.
Working children face a tough life; in factories and mines they work in bad conditions no fresh air, long hours they may be injured by machines they are also deprived of education and childhood.

Young people

Old people are more annoying by far. They are so quick to degrade and stereotype younger people even though every group has had their criminals and bad apples. They are rude and think they can say or do anything to anyone without the other person having any recourse. I have been victimized numerous times by older people and all old people can do is keep degrading us. So I chose Young people because that has a no one can touch me attitude, demo and think they know everything

Advances in technology

Technology is a broad concept that deals with a people's usage and knowledge of tools and crafts, and how it affects man's ability to control and adapt to its environment. In the last two centuries, humanity has witnessed great technological developments that are not to be paralleled with any other past times in history.
To begin with, technological advances have helped people use tools and materials that made life easier for them. To give one example, the use of the phone and the internet has made it extremely possible to communicate with any person on any other part of the world. Spatially speaking, people managed to set their foot on the moon and discover things that were in the past only myths for many of us.
For all these reasons, I believe that one has to look at the other side of the coin and believe that technological development is double-edged. To conclude, and as far as I am concerned, technological advances are a major step in the development of nations and societies and it is imperative to make good use of those developments and make it accessible to all individuals in the world.

The advantages and disadvantages of technology

In fact, technology has changed the way we live and communicate, but at the same time it is the reason behind many problems and phenomena in our daily life. Mankind is grateful for technology's benefits in different domains. For example, with internet people can get information easily, sending résumés to companies and booking rooms in hotels In addition, technology has helped doctors to find cures to some chronic diseases.
Despite its advantages, people's health is getting worse and worse because of the fumes of factories and the smoke of cars and buses. The most dangerous inventions are rockets and bombs which kill innocent people and destroy everything. Moreover, workers are replaced by machines in companies which increase the number of joblessness in many countries.
It all comes down to saying that people must be aware of the use of technology, since this latter aims at improving people's life not killing creatures.

Natural disaster

A is the consequence of when a potential natural hazard becomes a physical event (e.g. volcanic eruption, earthquake, and landslide) and this interacts with human activities.
Human vulnerability, caused by the lack of planning, lack of appropriate emergency management or the event being unexpected, leads to financial, structural, and human losses. The resulting loss depends on the capacity of the population to support or resist the disaster , their resilience.[1] This understanding is concentrated in the formulation : " disasters occur when hazards meet vulnerability".[2] A natural hazard will hence never result in a natural disaster in areas without vulnerability, e.g. . Strong earthquakes in uninhabited areas. The term natural has consequently been disputed because the events simply are not hazards or disasters without human involvement.

Women's position

Nowadays, we all notice that women's position has greatly changed in society. Their efforts have been crowned by getting an equal position to men in all domains.
Women could not go to school and stayed with their parents at homes. Thus they were regarded illiterate and ignorant as well. Their jobs were looking after their husbands, cooking daily meals and washing dishes as machines. They were not allowed to vote and were under the authority of men.
Everything has now changed, women have become aware of the significance of education, and so they go to school and get good marks. More than that, they have been appointed teachers and directresses in great schools. Because of their strong struggles, women can share with men some political posts like working in courts as judges or lawyers.
In addition to that, women wear whatever they love and go to cafés as men
All in all, the marginalization of women in the past led them to suffer a lot and live a difficult life. However, women struggled to show their existence in society and have finally got their rights as men.

Personal values

Personal values are one of the most important things in our life. This Life as we know it now wouldn't be possible without personal values that regulate it. Indeed, the more values a person has the more respect and admiration she/he gets. For instance, people who value hard-work often end up being the most successful. I have never known a person who works hard and never succeeds in life. Likewise, honesty is another value that is key to success in life. Honest people earn the trust and reliability of others. They are valued for their honesty and truthfulness. Undoubtedly, there is nothing more rewarding than knowing people with such values as honesty and hard-work. With these people one can establish fruitful relationships that are to the advantage of everyone. True to say, honesty and hard-work are two cornerstones for a good and successful life.

Parents-children relationship

Parents-children relationship differ from one family to another. While some parents complain that their children don't listen to them anymore, children on the other hand complain that their parents don't understand them any longer.
My relationship with my parents is a good one , I respect them and understand them, the allow me to choose my friends my cloths to travel alone and to invite friends home, however , they are very strict when it comes to my homework or staying late out late at night .
To have a good parents-relationship is very easy thing if both parents and children make efforts to create such a kind of relation ship.
